

DECLARATION OF COMPLIANCE OF CONSTITUTIVE COMPONENTS FOR THE MANUFACTURE

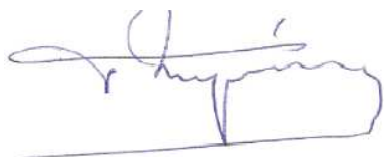

ATMI float level switches ranges

TO WHOM IT MAY CONCERN:

ATMI certifies the high reliability of the float level switches mentioned above because of our total investment in the choice of components (high quality cables with great flexibility, micro-switches withstanding over 600,000 cycles, polypropylene copolymer resistant to mechanical shocks and thermal-admissible temperatures depending on the model from -40° up to 90° C) and our systematic individual tests before shipment.

The 2nd March 2016

Regards,

Roland RUQUIER

President
